

PRODUCT DATA SHEET: RS1 DESKTOP

The RS1 Desktop is easy to use and fits nicely into any record bag. Powered by a 9V battery and available in a range of colours. A perfect gift for anyone into music.

This Dub siren has Internal Echo, making set-up as simple as plugging into a Mixers Line channel. Different from the transistor based NJD siren. It uses LC timers to produce another very common sound that is found in dub music. Most of the sounds you hear in dub music are sirens played through echo machines. Echo is very important for any true dub/reggae selector to get that original old-skool desired sound. We designed the first ever echo siren box back in 2011, after its great success, it has now become the industry standard dub siren. Owned by thousands of sound systems, producers, DJs and likewise worldwide. The Echo design has positive gain for endless looping and creates noise like most tape echoes. Not many echoes (on your DJ mixers for example) can do this. It can also be used to tune and re-pitch sound in some weird and wonderful ways.

This unit contains professionally designed and manufactured, gold plated, PCB's, found only in Rigsmith' s units.
