

PRODUCT DATA SHEET: RE2 RACKMOUNT

The RE2 is our most popular FX, it combines both Reverb and Echo for the classic king tubby style dub combination. Rackmounted, perfect for soundsystem meet sessions and music production. Always attracting attention with its thunder crash once you have had a go, you will be hooked and others will want a go.

The machine is made in RAW STYLE., it can make all the classic Reverb Splash and noise unlike digital units. The Echo can generate noise to make outer space style effects; sounds such as gunshots can be created from nothing and sound very convincing with dual effect Reverb Splash Echo style. The Echo feedback has positive gain so that not only can something echo for a very long time, it can also make small sounds louder with each repeat until it becomes distorted. A very dubby-technique. Remember though, that this is not just a box to create crazy noises. The RE2 has many studio applications, RE2 on Vocal and Snares is a must and some producers have told us they use it in every production.

Provided with a power supply (PSU). Please advise which is needed on purchase, options available are UK, EU and USA PSU.
